Growth Technology

CLONEX[®] MIST

Root Promoter™
1 quart / 946 ml

CONCENTRATE

Instructions for Dilution:

Mix one part **Clonex Mist Concentrate** with three parts clean water.

E.g. to make 1 gallon of solution:

Add 1 quart of Clonex Mist Concentrate to a clean plastic container. Add three quarts of clean water and shake well before misting over plants.

Instructions for Use:

If possible spray the tips of the mother plant with **Clonex Mist** once or twice in the two weeks before taking cuttings.

We recommend **Root Riot** cubes but Rockwool cubes are also useful.

- 1/ Take cuttings by making a clean diagonal cut just below a leaf node.
- 2/ Dip into **Clonex Rooting Gel** immediately and insert cutting into a rooting cube.
- 3/ Spray new cuttings with **Clonex Mist** and place them into a propagator.
- 4/ After 2–3 days mist the cuttings again.
- 5/ Repeat misting every two days, or whenever cuttings look dry.
